1:15 – 1:30 pm	Break
1:30 pm – 3:45 pm	Managing Chronic Constipation; Part II

## Course Description

Common misconceptions about digestive diseases can be dangerous if they keep a person from correctly preventing or treating an illness. Researchers have only recently begun to understand the many, often complex, diseases that affect the digestive system. Accordingly, people are gradually replacing folklore, old wives' tales, and rumors about the causes and treatments of digestive diseases with accurate, up-to-date information. But misunderstandings still exist, and, while some folklore is harmless, some can be dangerous if it keeps a person from correctly preventing or treating an illness.

As acuity levels of patients continue to rise, today's healthcare provider is confronted with patients with life threatening complications with more and more frequency. This educational activity will challenge the attendee's critical thinking skills as various complex patient situations are covered through comprehensive lectures and case studies. As nurses are the constant force at the bedside, physician's office and clinics, it is imperative they understand the pathophysiology of these complications, have the ability to able to respond appropriately.

This program is designed for primary care nurses, nurse practitioners, and learners will gain an understanding of the disorders of the gastro-intestinal tract, the complications associated with these, and assist their patient's in their ability to manage their diseases.

This activity has been submitted to the New York State Nurses Association for approval to award contact hours. The New York Nurses Association is accredited as an approver of continuing nursing education by the American Nurses Credentialing Center's Commission on Accreditation.
